

Session 9: Monday 15th April

MEGAN BAILEY

ALTERNATIVE PATHWAYS TO SUSTAINABLE SEAFOOD

Key lecture topics

This lecture will:

- cover the rise of the sustainable seafood movement; and,
- offer background on value chain governance, marine stewardship council certification, and alternative pathways for seafood sustainability that rely less on big market capitalism and more on reconnecting with where seafood comes from.

Preparatory materials

Stoll, J. S., Bailey, M. & Jonell, M. 2019, [Alternative pathways to sustainable seafood](https://doi.org/10.1111/conl.12683). *Conservation Letters*. doi.org/10.1111/conl.12683

Questions (for reflection only, not written response)

We will be discussing what makes seafood sustainable and who should decide what's in and what's out in terms of labelling something sustainable.

If you eat fish and seafood, do you know where or how it is caught? Does it matter to you? Should it matter to everyone?

Do you know where the main fisheries operating in your country send their catch? Is it consumed locally, regionally, globally? What is the interaction between seafood export and seafood affordability where you live?
